
Run 4 | GNSS horizontal strain rates | Eurasia-fixed
Xu GMT workflow | R=6378 km for distance scale | No added smoothing
a EE: east-west extension / shortening
b NN: north-south extension / shortening
c EN: tensor shear (half engineering shear)
d Maximum shear: half principal-rate difference
e Horizontal dilatation: EE + NN
f Tensor magnitude: sqrt(EE^2 + NN^2 + 2 EN^2)
nstrain/yr
70°E

30°N
25°N
Positive EE/NN/dilatation = extension. Shared color limits use P99; saved grids are not clipped. Outer-cell gradients depend on GMT boundary conditions.
